

Hanging the Height Adjustment System

Height Adjustment System

Upper Clevis

**Cam Cleat and
Double Upper Pulley**

Single Lower Pulley

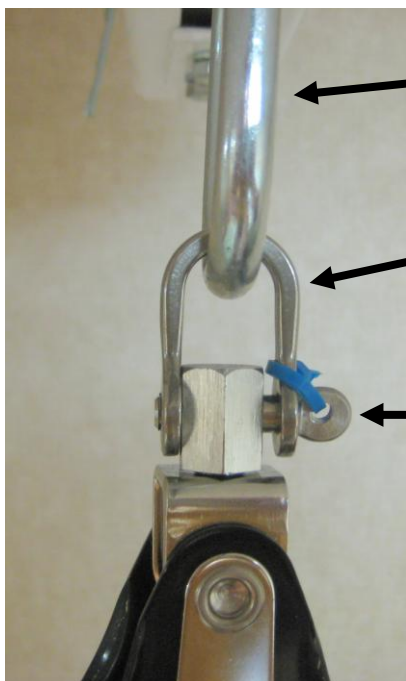

Lower Clevis

Free end of rope

Spreader Bar

The Height Adjustment System should be hung as shown in picture on left. The double pulley and cam cleat should be on top with cam cleat opening facing toward the ceiling.

Upper Clevis (close up)

**Trolley or
carabiner**

Clevis

**Threaded
clevis pin with
retainer tie.**

Check the upper and lower threaded clevis pins to ensure they are tight and secure on regular basis. Clevis pins should be secured by placing a drop of blue Loctite #242 on the threads and securing with plastic retainer/zip tie or metal wire that is threaded through the head of the clevis pin and around the clevis as shown in picture.

Inspect all moving components and contact points for signs of wear frequently.
